Effortless Installation

Upon initial connection, the ABSplus software partitions and formats the ABSplus drive to reflect your computer's hard drive. A complete backup of all files, applications, and the operating system is then initiated. This creates a bootable ABSplus.

Automatic Backup

Each time the unit is plugged in, powered on or scheduled, the ABSplus automatically scans your source drive and copies only those files that have been changed or newly created since the last backup was performed. With a data transfer rate of up to 480 Mb/s, it's ideal for SOHO and small networks!

Restore

The new restore module provides "One Button Restore" and allows the user to review all backed up files and folders. The restore software allows the maximum flexibility to manage your data. As an added bonus, users can open files directly from the ABSplus.

Disaster Recovery Technology

The ABSplus Backup Software provides users with easy ways to recover from even the worst data catastrophe.

- **System Failure** – Simply connect the ABSplus to any computer for immediate access to all your data files, so you can keep working even when your computer doesn't.
- **Complete Hard Drive Failure** – The ABSplus is designed to allow you to replace your failed computer hard drive with the hard drive inside your ABSplus. With our step by step instructions, it couldn't be easier.

Scheduler

Each data set can be designated by file types, folders or complete drives. It can be set for date and time or date and connection. Missed events are identified and captured during your next boot.

Power Down

For those that are on the run, simply set the backup to power down your computer on completion. Just plug it in and go!
